

Abstract

A handheld mobile image sensing and printing device includes a support structure. A color image sensor is positioned on the support structure for sensing a color image. A
5 color printing mechanism is positioned on the support structure and is operatively
connected to the image sensor to print the image sensed by the image sensor. A remote
communications arrangement is positioned on the support structure and is operatively
connected to the image sensor to transmit data representing the image and to receive data
representing images to be printed by the printing mechanism.
